PERSONAL PROJECTS

Full Stack Food Order Management

- I developed a Full Stack Food Order Management System with **React, Redux, .NET Core and MS SQL Server**. It features a responsive UI for managing food items and an admin panel for adding, editing, and deleting items, managing admins and viewing orders. Users can add items to their cart and track their order status.
- [Github Repository](#)

Full Stack Bookstore Management

- I created a full-stack bookstore project using **Vue.js, Bootstrap, and .NET Core with MS SQL Server**. I built a sleek, responsive UI for browsing and managing books and implemented secure **RESTful APIs** with **JWT** for smooth interaction between the frontend and the database.
- [Frontend Github Repository](#)
- [Backend Github Repository](#)

E-Shopping

- Created an easy-to-use E-Shopping platform with **React.js and Bootstrap**. The project focused on making online shopping simple and enjoyable. Key features include product listings and details, a shopping cart and order management, all designed to provide users with a smooth and hassle-free shopping experience.
- [Github Repository](#)
- [Live Demo Link](#)

Earth-Lens

- I developed a dynamic web app with **Vue.js and Bootstrap**, featuring continent-based filtering and detailed country profiles. I used **Pinia** for state management, which helped keep everything organized and efficient. This project showcases my skills in web development, data management and user experience design.
- [Github Repository](#)
- [Live Demo Link](#)

E-Commerce

- I developed an E-commerce platform with **Vue.js and Bootstrap**, focusing on user-friendly design and essential features for a smooth shopping experience. I also used **Pinia** for state management to keep everything organized.
