Kolegji AAB (AAB College)
Computer Science - Programming

10/2022 - Present   *Pristina, Kosovo*

CERTIFICATES

FreeCodeCamp – Responsive Web Design (HTML, CSS) ☐

FreeCodeCamp – JavaScript Algorithms and Data Structures ☐

FreeCodeCamp & Microsoft – Foundational C# with Microsoft ☐

AAB College - Full Stack Application Development ☐

PERSONAL PROJECTS

E-Commerce
- Developed a straightforward E-commerce platform utilizing **Vue.js and Bootstrap**, prioritizing ease of use and functionality. Designed and implemented essential features to ensure a smooth online shopping experience for users.
- Github Repository
- Website Link

Earth Lens
- Developed a dynamic website with **Vue.js and Bootstrap** providing comprehensive information on countries worldwide. Features include continent-based filtering and detailed country profiles for enhanced exploration. Demonstrates proficiency in web development, data management, and user experience design.
- Github Repository
- Website Link

E-Shopping
- Created an easy-to-use E-Shopping platform with **React.js and Bootstrap.** The project focused on making online shopping simple and enjoyable. Key features include product listings and details, a shopping cart, and order management, all designed to provide users with a smooth and hassle-free shopping experience.
- Github Repository
- Website Link

Full Stack Bookstore Management
- Developed a comprehensive **Full Stack** Bookstore project using **Vue.js & Bootstrap** for the frontend and **.NET Core with MS SQL Server** for the backend. The project included designing a sleek and responsive user interface for browsing and managing books. On the backend, I implemented robust **RESTful API** endpoints to manage and perform **CRUD** operations with books and its data, also used **JWT** for secure authorization. This combination ensured seamless and secure interaction between the frontend and the database, providing a smooth, efficient, and user-friendly bookstore experience.
- Frontend Github Repository
- Backend Github Repository

Full Stack Food Order Management
- Developed a **Full Stack** Food Order Management System using **React and Redux** for the frontend, and **.NET Core with MS SQL Server** for the backend. The project featured a sleek and responsive UI for browsing food as well as adding, editing, and deleting items. Implemented robust **RESTful API** endpoints for **CRUD** operations, ensuring efficient and secure data management.
